Mobile App with Builderfly

App Store Training Guide

Builderfly offers an AI-powered native iOS and Android mobile app for easy accessibility to the store front and increased customer-reach. Builderfly offers free mobile application with the three paid subscription plans viz. Standard, Advance, and Pro. The mobile application is fully customizable and can be designed separately as per the requirements. Moreover, with the power of Artificial Intelligence, the mobile app can automatically sync with the store front unless opted out. With the auto syncing facility, you need not re-enter the store data in the app store. All the features including separate font styles, color pallets, and much more are available with the free native mobile app.

Steps to create a mobile app with Builderfly:

Registering with Builderfly is a simple and quick process. Within a few steps, your details can be stored for a lifetime. Moreover, the AI-powered mobile app helps in syncing the store data with the mobile data as well as helps in studying the customer behavior.

- Go to your Builderfly Dashboard and click on 'App Front'
- Click on 'Get Started' to start building the mobile app

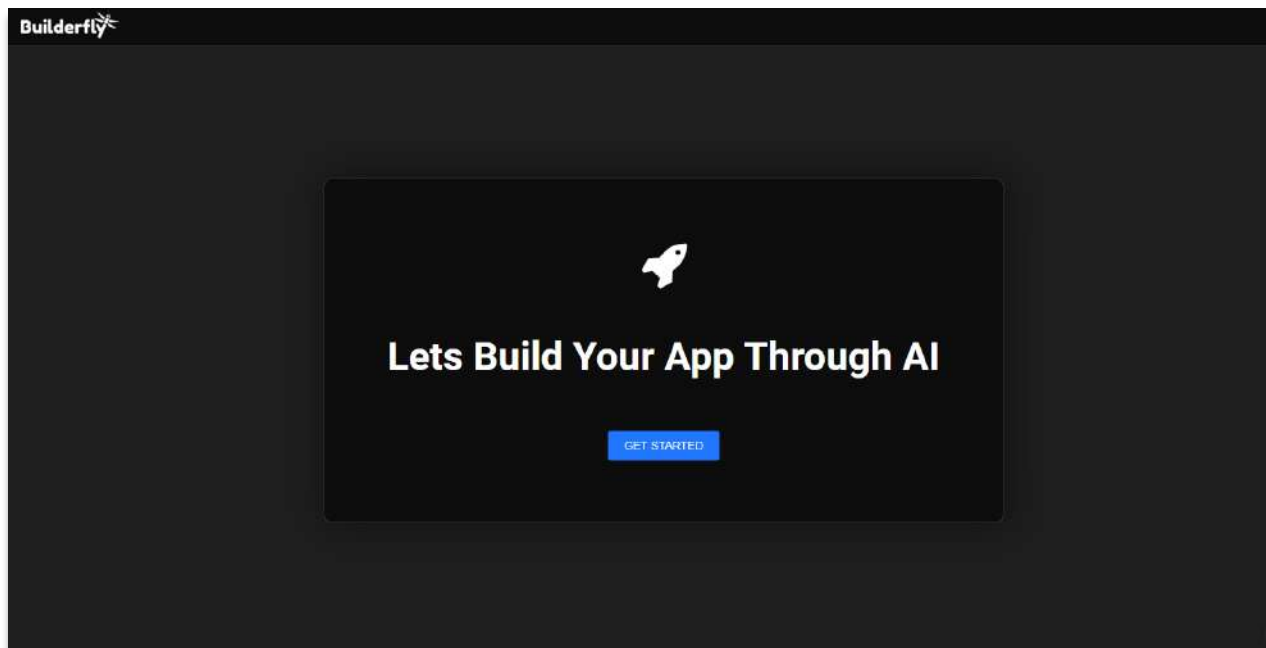

Build Your First Mobile App with AI

Design – Build – Publish with applications employing Artificial Intelligence.

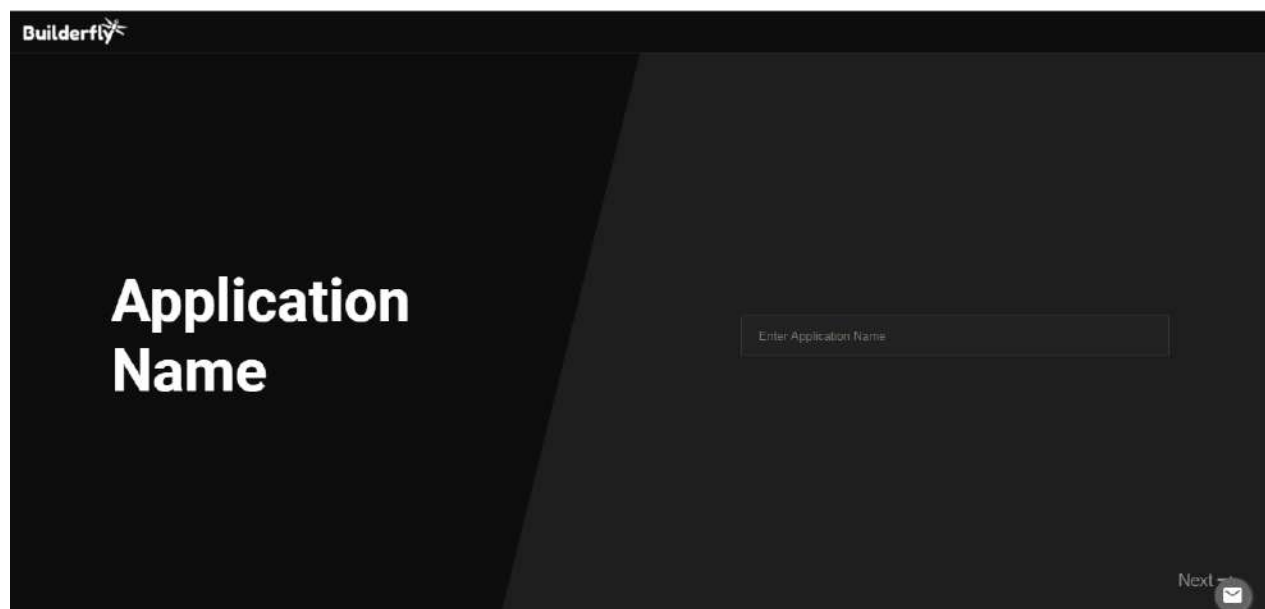

Get Started

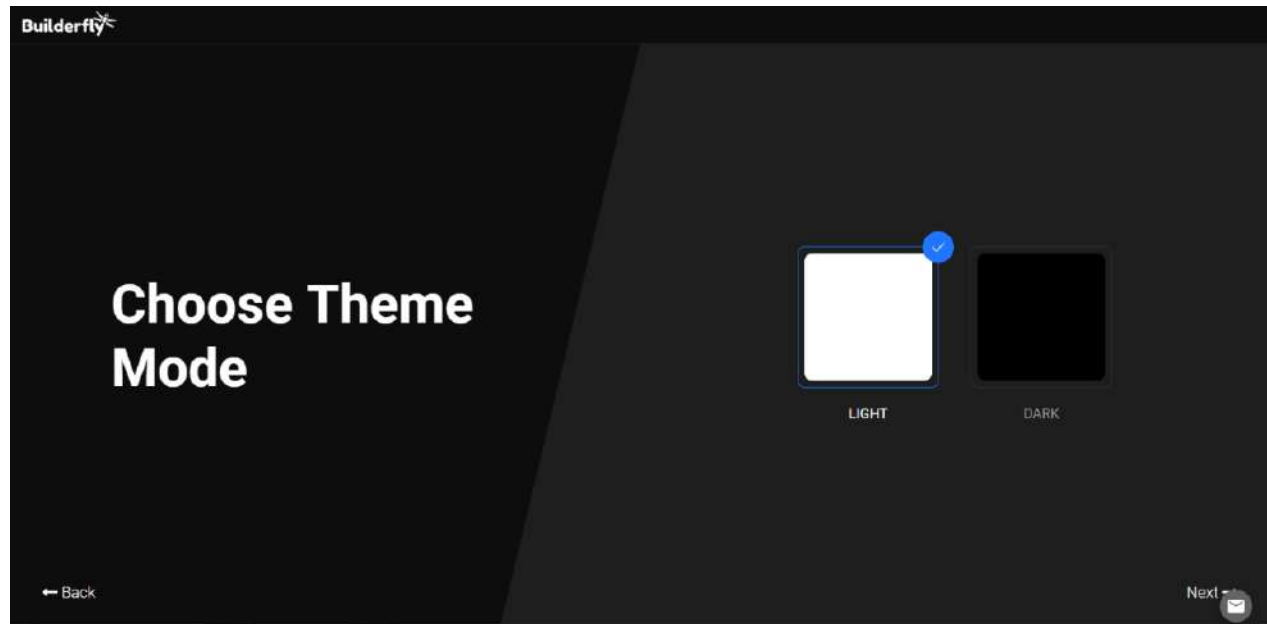

Explore the wide range of features offered with the AI-powered mobile app. Click on 'Let's Build Mobile App with AI Flow', Click on 'Get Started'.

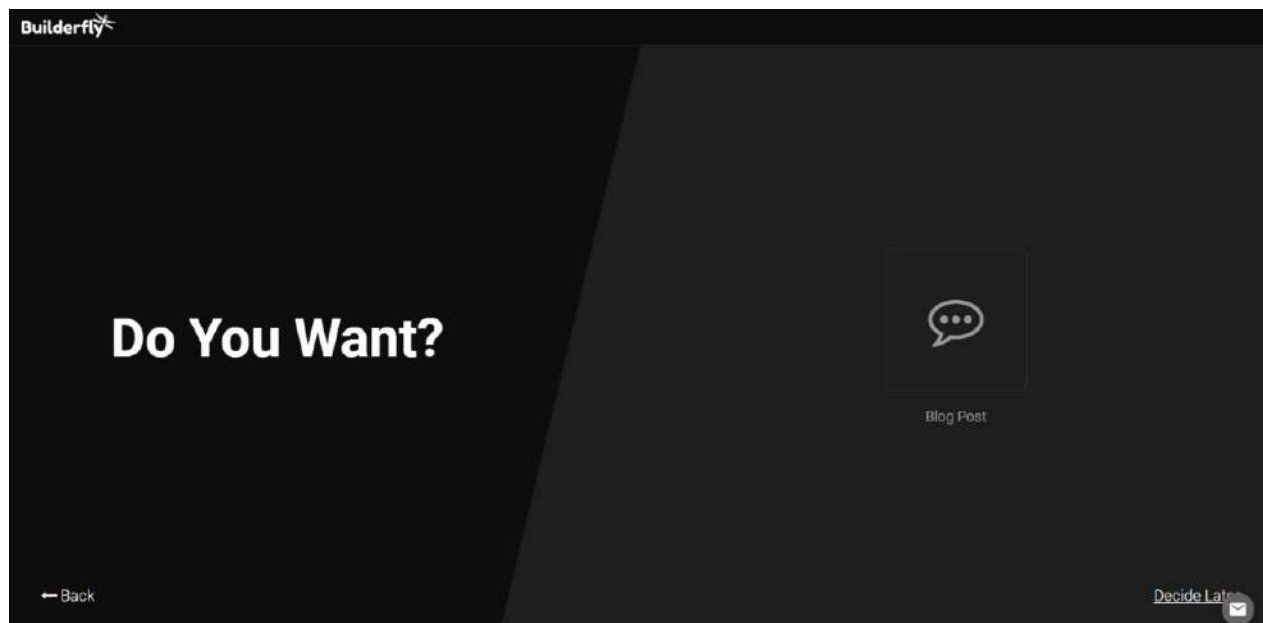

Enter the Application name and click on the 'Next' button

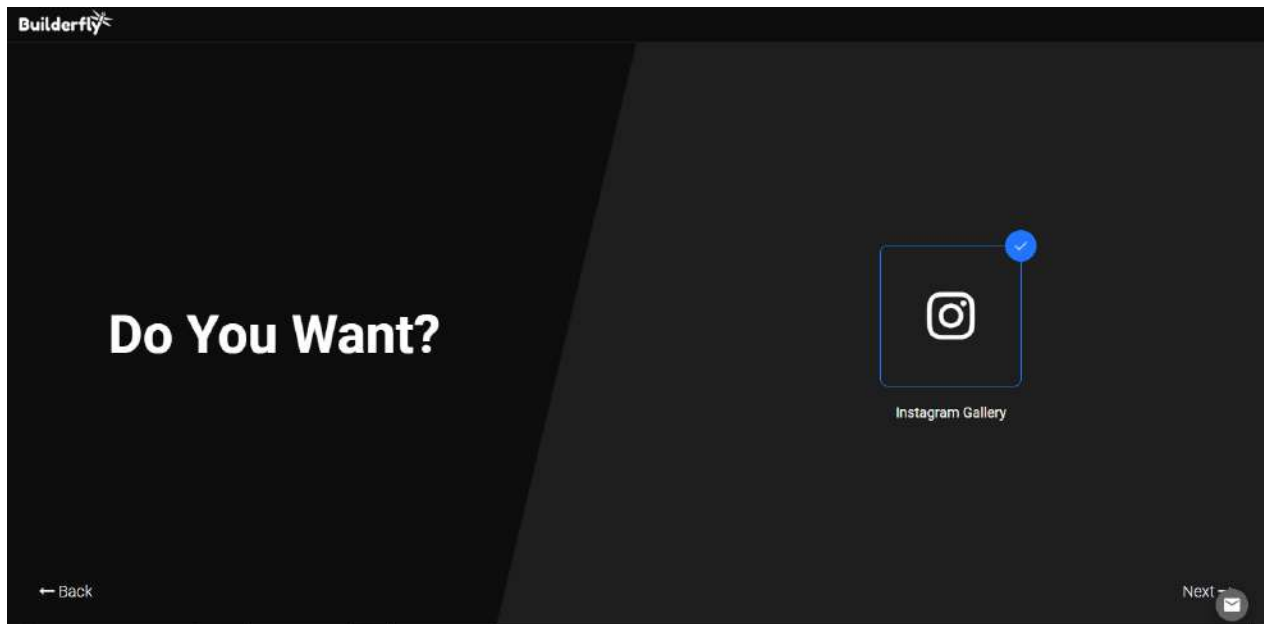

Choose a suitable theme mode and click on the 'Next' button. You will have the option to change it later from the design section if you want.

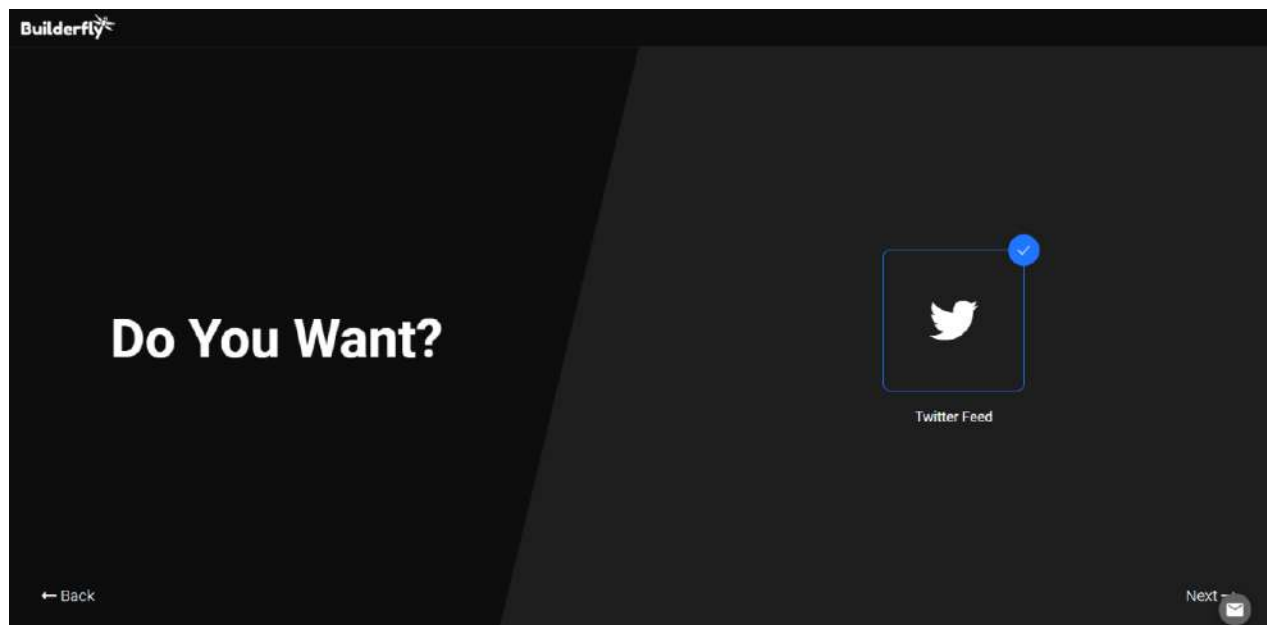

Choose whether you wish to add blog posts to your app and click on the 'Next' button

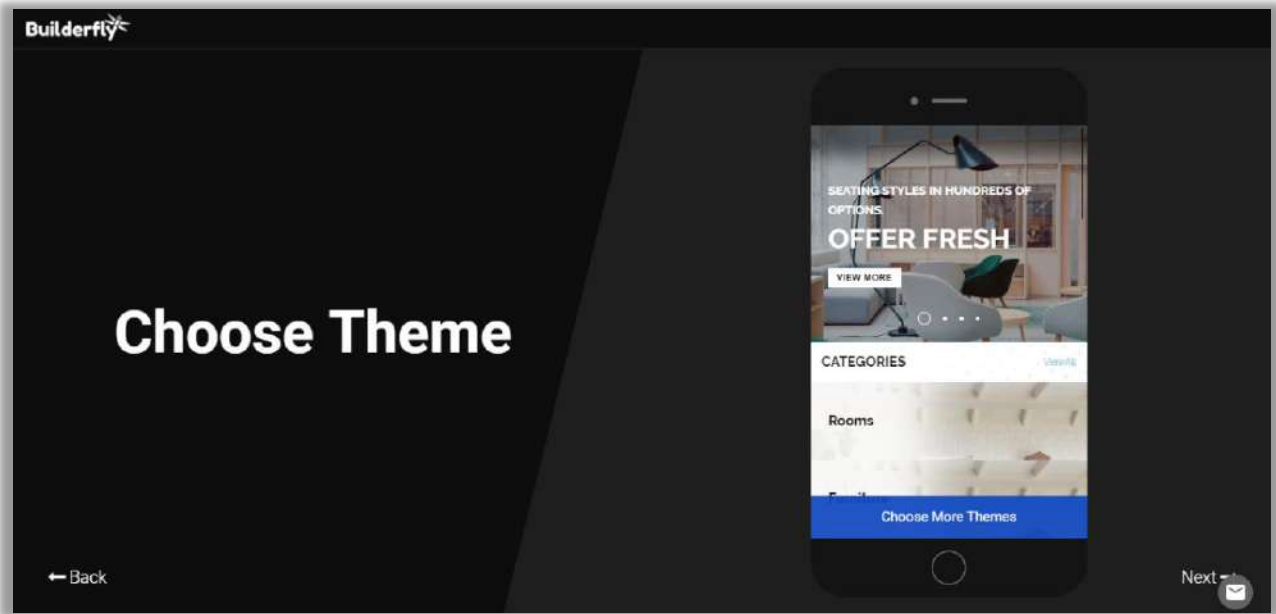

Choose whether you wish to add Instagram Gallery to your app and click on the 'Next' button

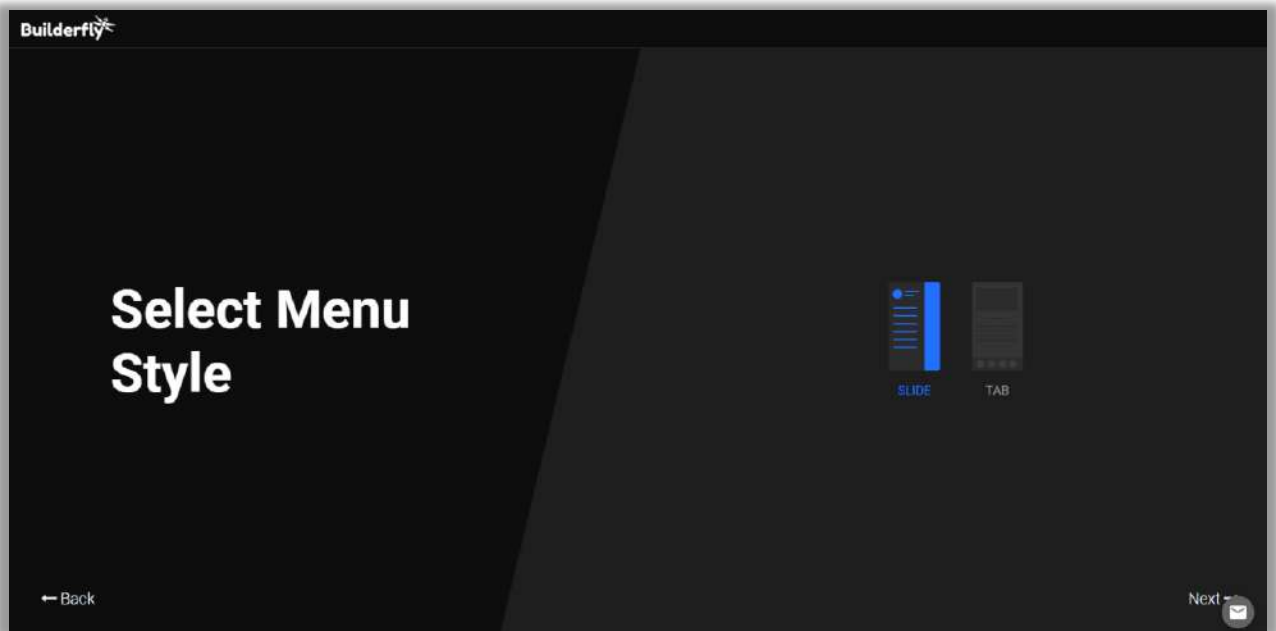

Choose whether you wish to add Twitter Feed to your app and click on the 'Next' button

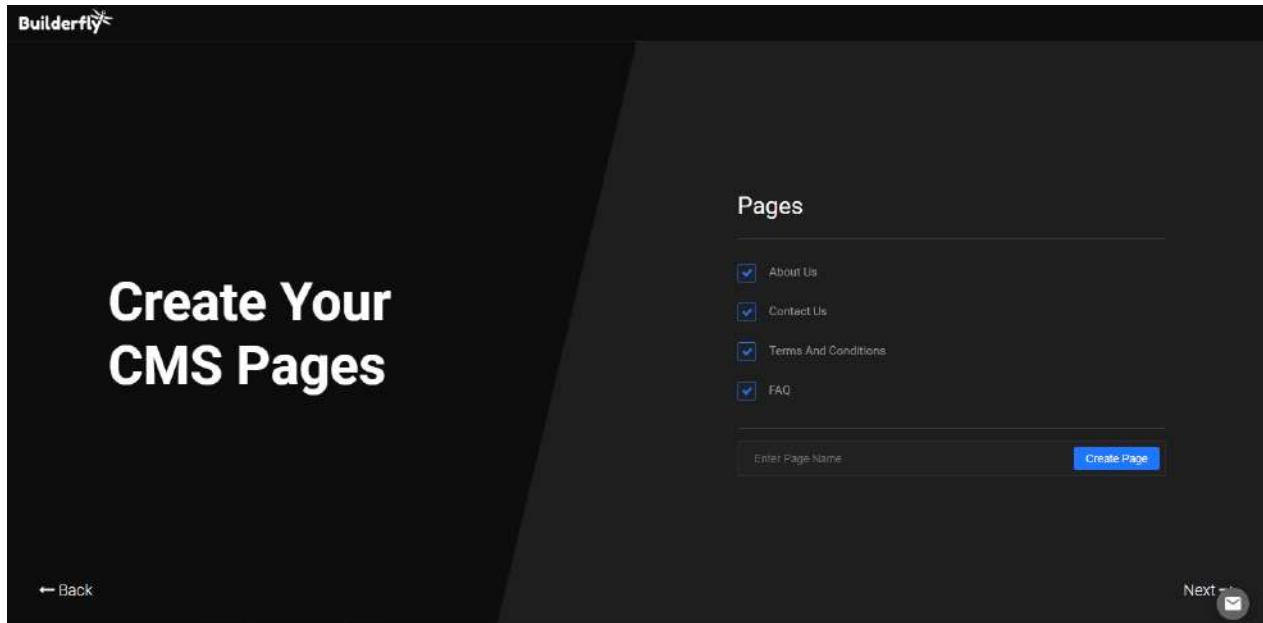

Choose a suitable theme for your app store and click on the 'Next' button

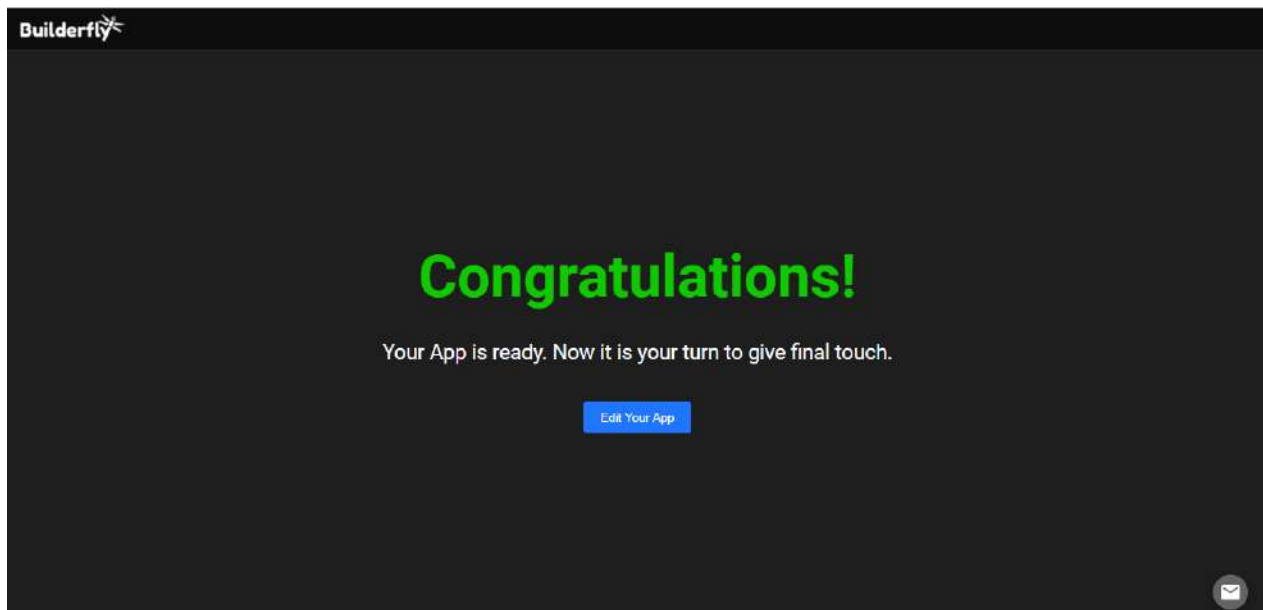

Select the mobile app menu style and click on the 'Next' button

Create your mobile app CMS pages by entering the page name or click on the already available names. Click on the 'Next' button.

Once you select all the options, Builderfly AI flow is ready to setup your mobile app by syncing your home page, welcome page, category, sub category, product image, and product detail.

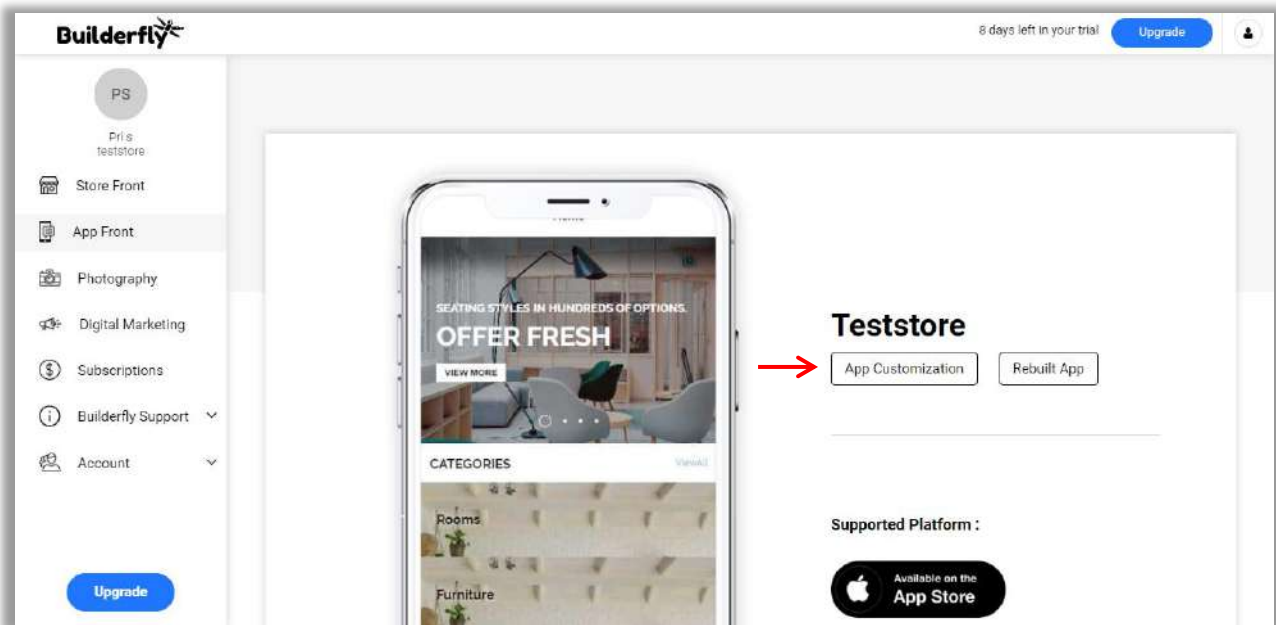

Your Native iPhone and Android application is ready to publish on apple and Google store. Currently, it shall exactly seem as your web store. The reason being, all the data for your mobile app has been synced from the web store. However, Builderfly offers the facility to differentiate your app with the power of customization. Click on "Edit Your App" and explore the broad array of features to customize your native app.

Mobile App Design Section

Permanent Mobile App Dashboard

Once you are done with building the app using AI flow, all consequent logins will land to your permanent mobile app dashboard. You can always customize your app by clicking on the 'App customization' button. At any point in time, if you wish to rebuild your app, you can click on 'Rebuild App.' The current version of your app on both the supported platforms are displayed on your dashboard. Herein, you can download the Builderfly Step-By-Step Guide, view the number of app downloads, users, and users by country. Moreover, you can request for Custom App Development, Expert Support, and other Add-On services.

Edit your App Store

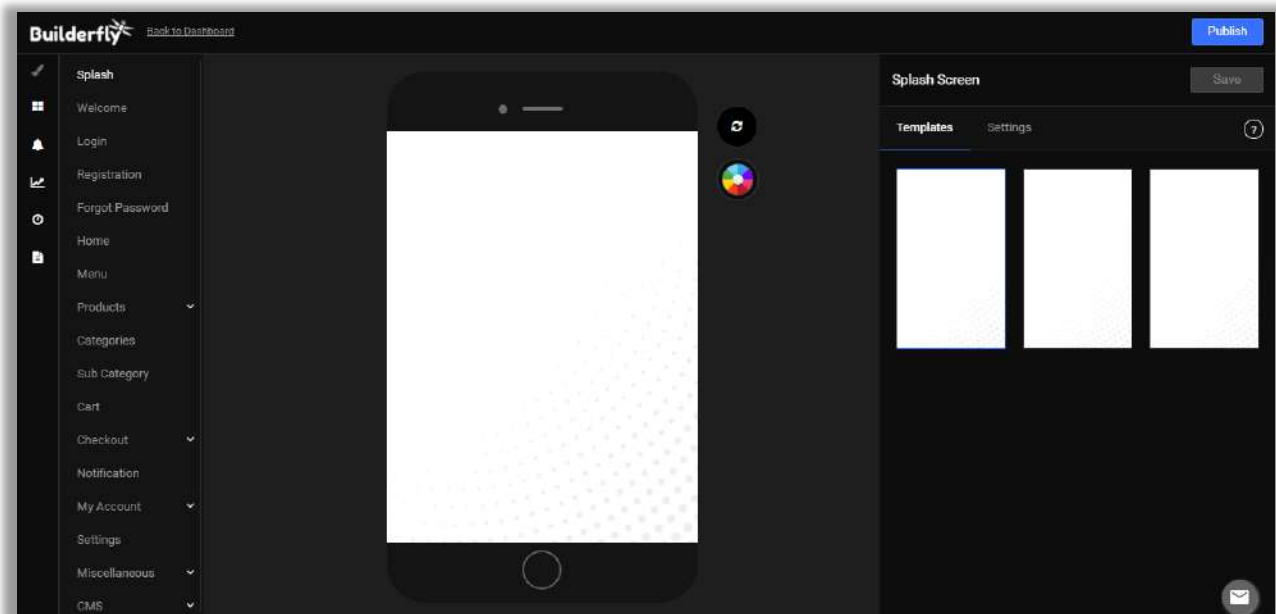

Builderfly offers the complete authority of customizing the app front to you. Your app can be designed as per your convenience and likeness. Moreover, we ease your process by providing ready-to-use theme templates, fonts, and much more. Go through the step-by-step procedure to explore the wide range of features in the app store.

Splash Screen

The splash screen is the window that appears when an application is opened. It is a bold first impression of your brand identity. You can customize the screen to add your logo or an image along with the current version of your software.

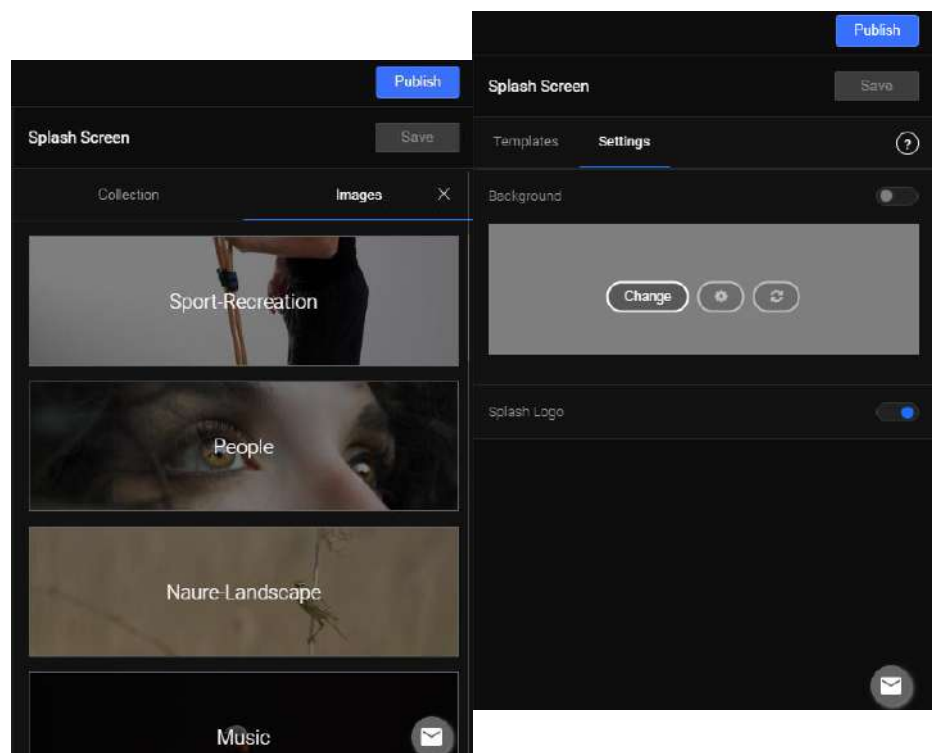

Things you can do:

- Choose a template for your 'Splash Screen'
- Select a color for the screen from the color palette
- Click on the 'Refresh' icon above the color palette to sync data from the online store

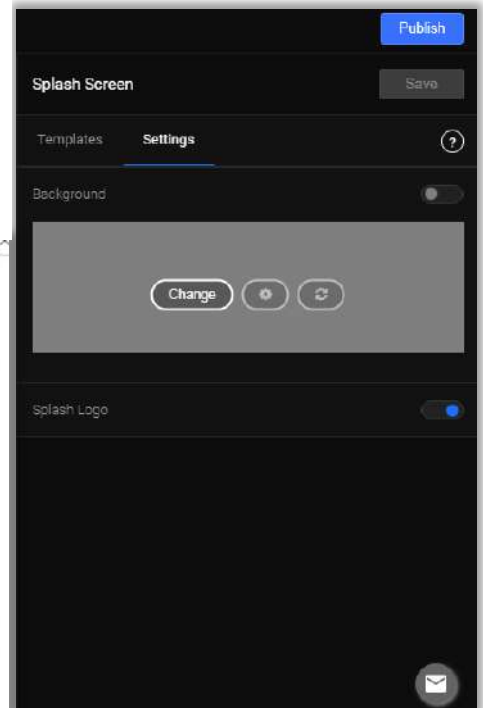

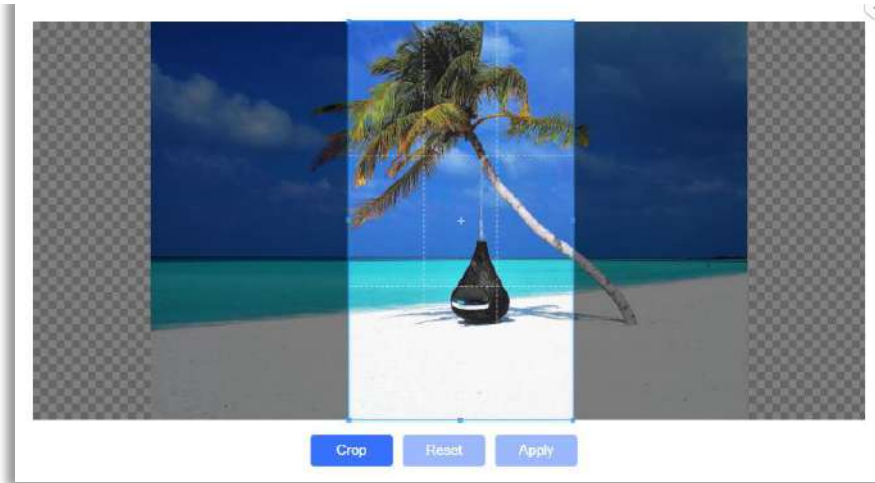

Splash Settings

When you click on the 'Settings' icon in the Splash Settings, you get the option to crop the background image. All you need to do is select the region that needs to be cropped and click on the crop button. However, make sure to save all the changes you have made.

Splash Settings>Cropper

Select the image from the gallery and with the 'Cropper' you can crop any image by selecting a particular area.

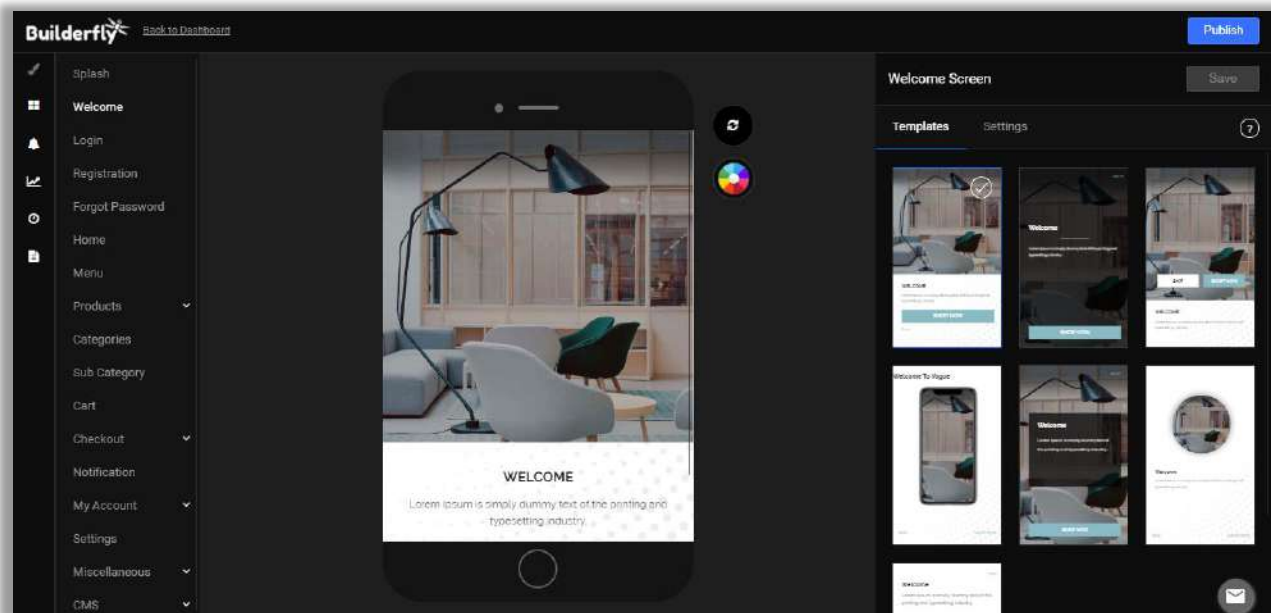

Welcome Screen

The welcome screen can be referred to as the first screen that your user will view when they visit your application. Your customer must be directed to where he must go further from the welcome screen. Builderfly offers ready-to-use templates for your welcome screen so that you can design your welcome screen as per your requirements.

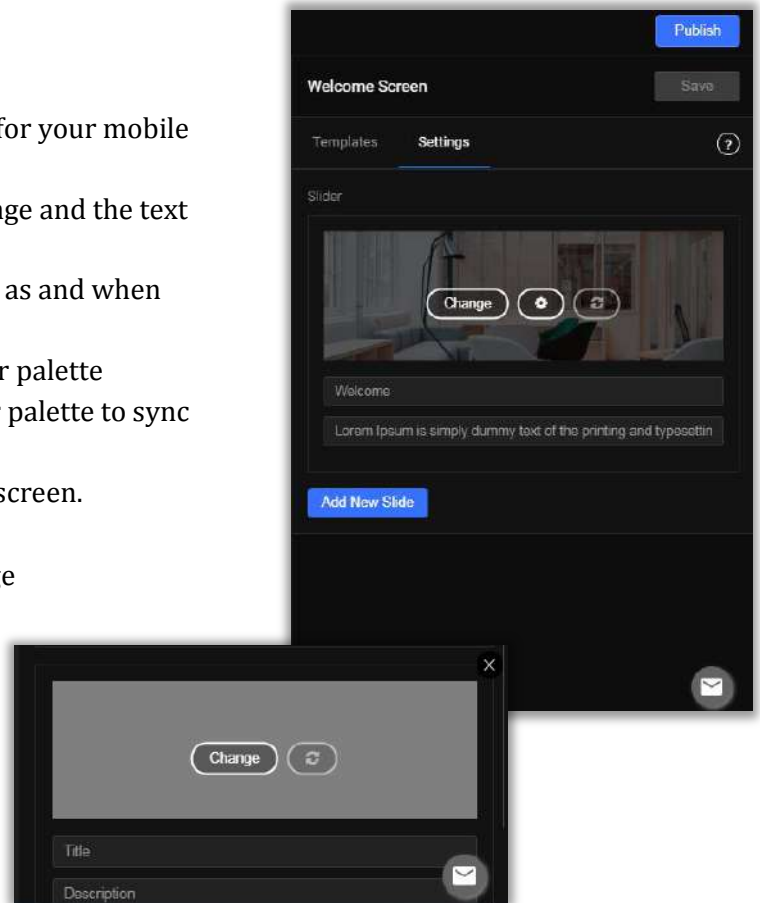

Things you can do:

- Click on the 'Settings' and add or change the background image if required
- Choose whether to add a 'Splash Logo.'

Welcome Settings

- Choose the layout of the welcome screen for your mobile application
- Upload and edit your welcome screen image and the text from the 'Settings' tab.
- Add more details to your welcome screen as and when required.
- Select a color for the screen from the color palette
- Click on the 'Refresh' icon above the color palette to sync data from the online store
- Edit and manage content of the welcome screen.
- Add new slide.
- Change and manage the background image

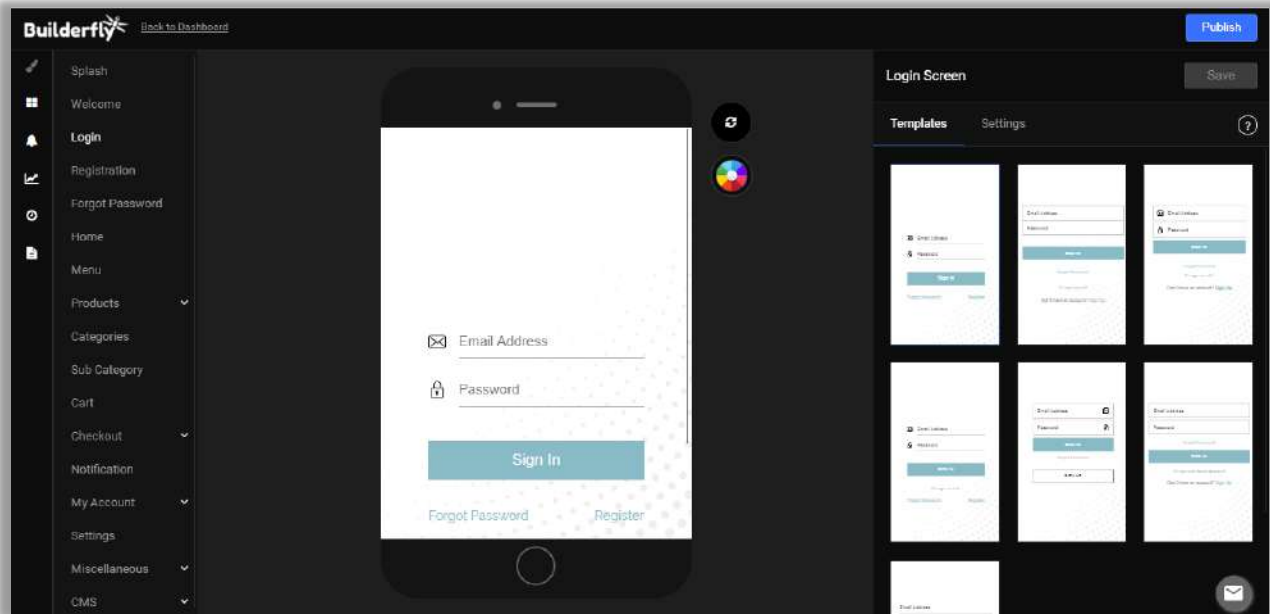

Login Screen

The login screen is the door for your customer to enter the mobile application. Usually the login screen consists of two input fields such as the user name/ email address and the password. The login screen must also include the facility where the customers can find the way to enter the application when he/she does not remember the login credentials.

Things you can do:

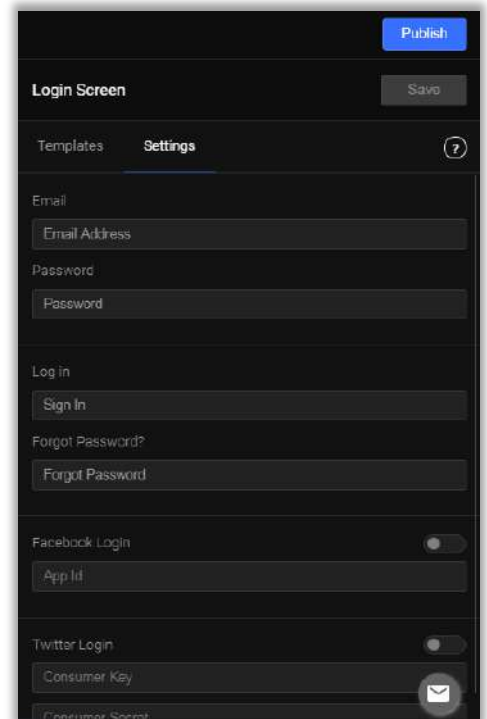

- Choose from the ready-to-use login templates and click on the 'Save' button.
- Edit text from the 'Settings' tab
- Select a color for the screen from the color palette
- Click on the 'Refresh' icon above the color palette to sync data from the online store

Login Screen Settings

The login screen settings allow you to change the display name of the Email Address, Password, Login and Forgot Password.

You can click on the toggle button to integrate your social media handles such as Facebook and twitter.

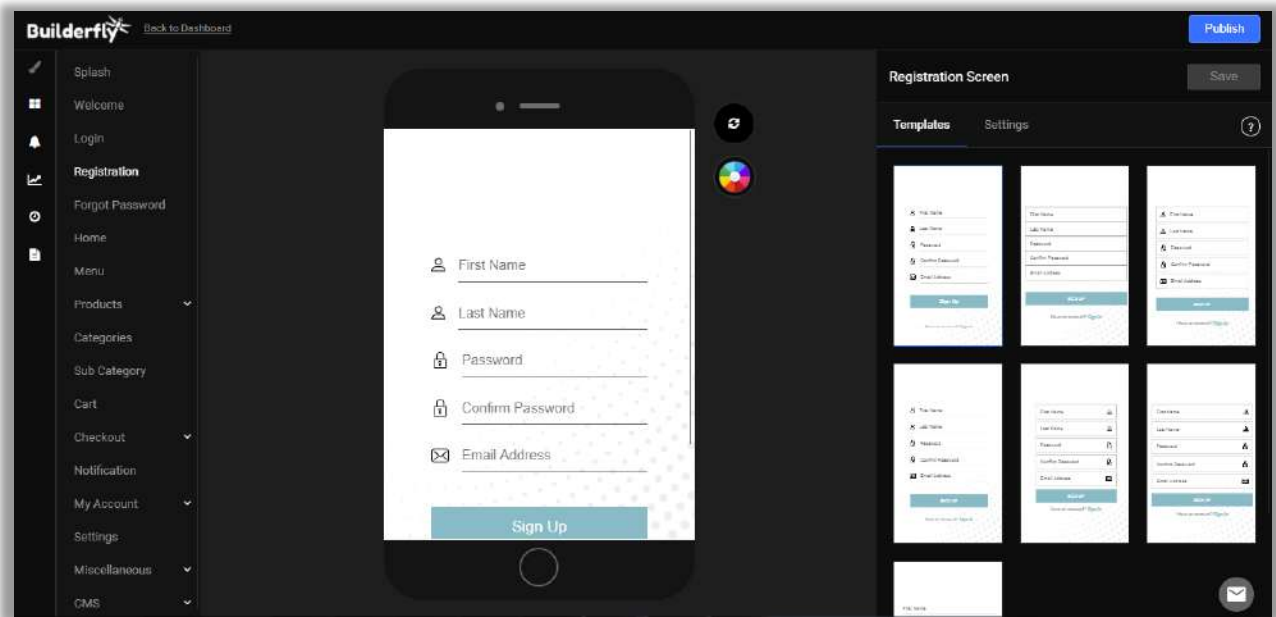

Registration Screen

The registration screen is the one-time screen where your customers can provide the necessary contact details such as their email address, mobile number, location, etc. All the information that you seek from your customers for a smooth experience must be included in the registration screen.

Things you can do:

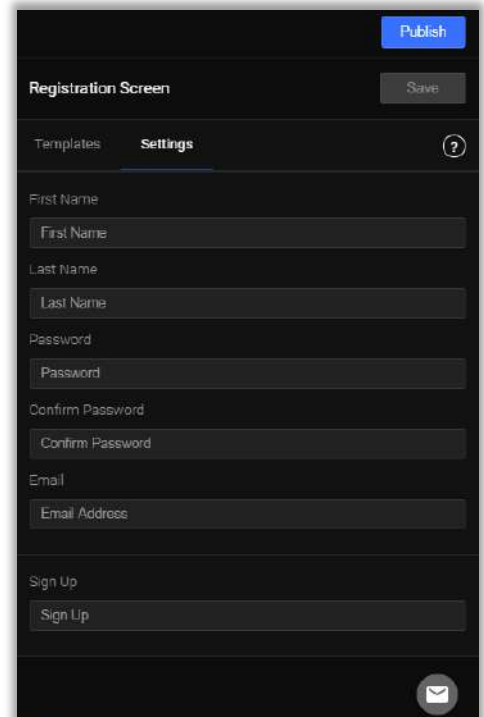

- Decide the layout template of the 'Registration Page' of your application
- Choose the background
- Manage the input setting
- Manage the button setting
- Click on the 'Save' button

Registration Settings

Once user select the registration template he can edit the name of each filed from the recreation settings.

Suppose if we select above template then we can edit the name of first name, last name, password, confirm password, email and signup as well.

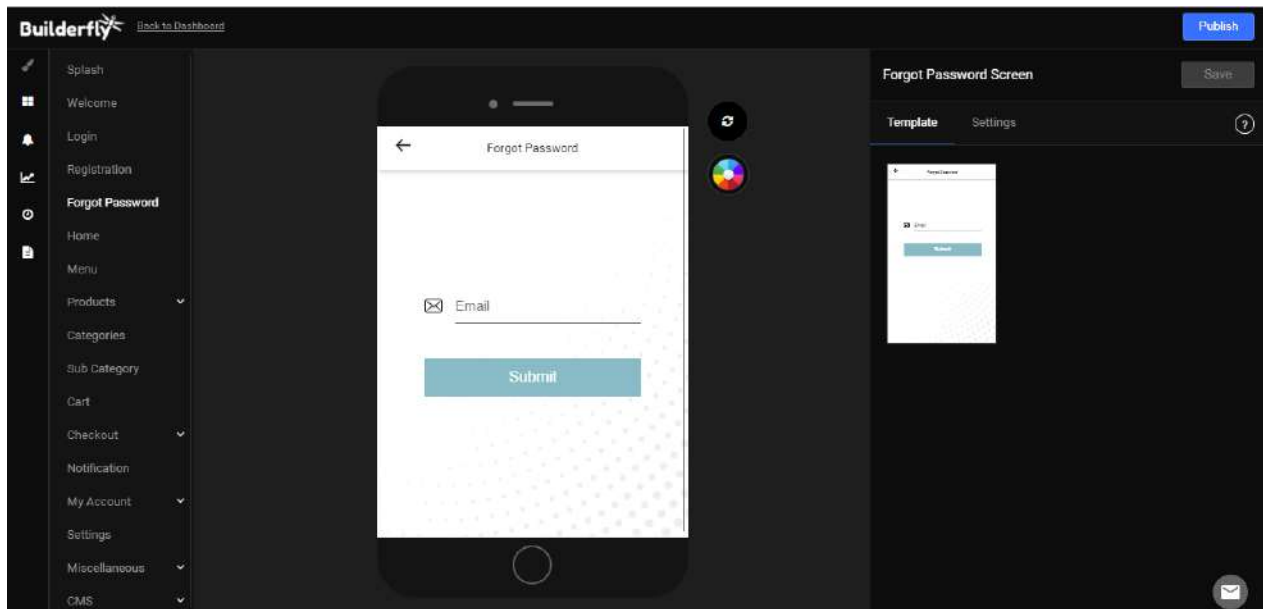

Forgot Password Screen

In case your customers forget their password to enter your application, they shall click on the 'Forgot Password' link on the 'Login Screen.' The link redirects the customer to the 'Forgot Password' screen. It is ideal to make it as simple as possible for your customer to get access to your app.

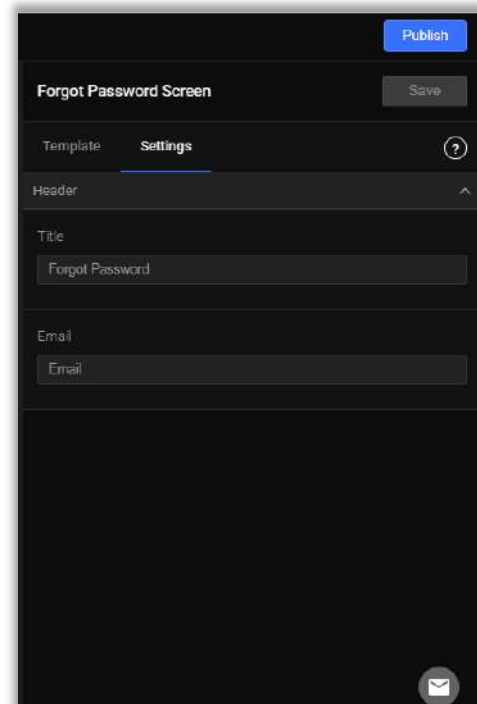

Things you can do:

- Select the template of the 'Forgot Password' screen of your application
- Choose the input field you wish to provide your customers for retrieving their password

Forgot Password Settings

You can change the display name for each field on this screen viz. 'Forgot Password' and 'Email'.

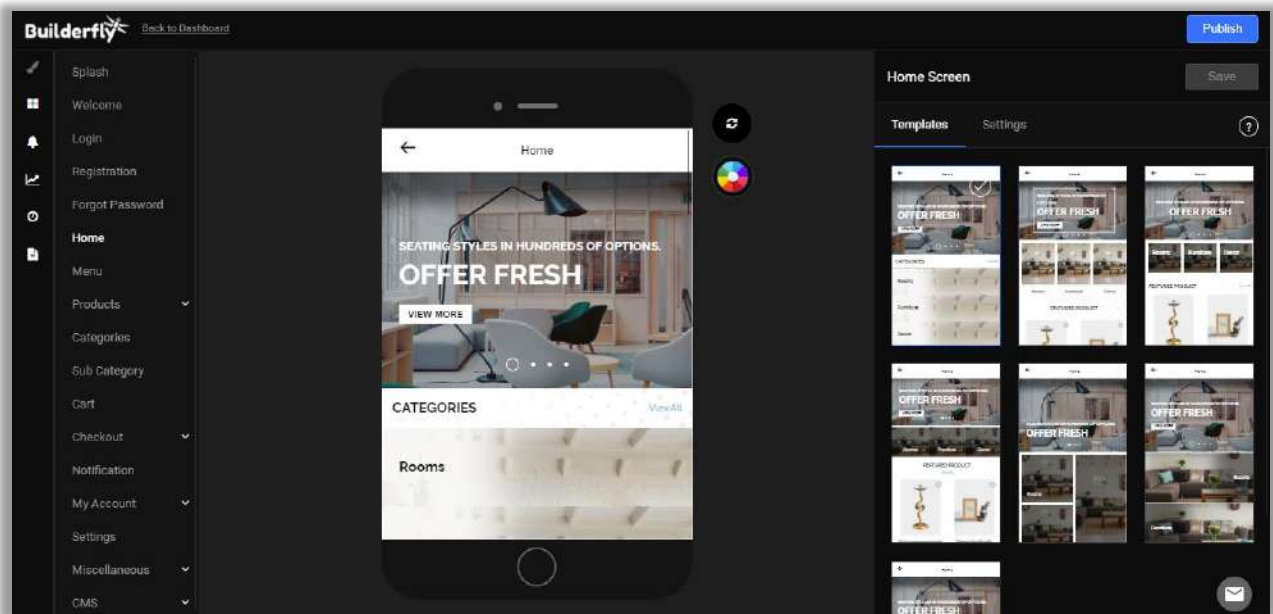

Home Screen

The 'Home Screen' is the main screen of your mobile application. It is the primary navigation screen wherein the user can choose the action for proceeding further. You can list all the available features of your store in the home screen for quick access of your customers to everything they would require.

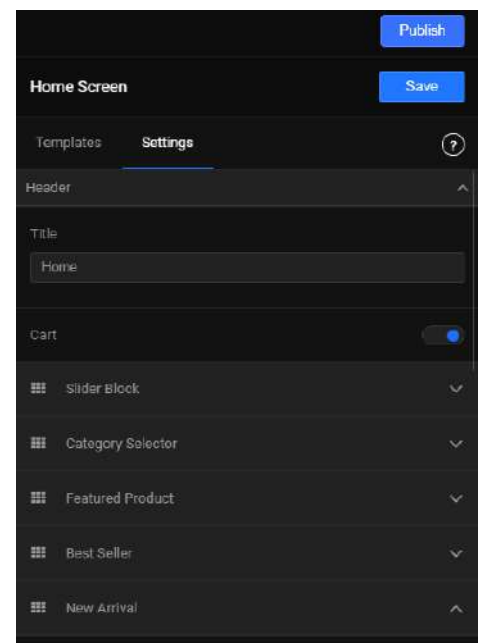

Things you can do:

- Based on your business, choose from the range of ready-to-use templates for your home page in the mobile application.

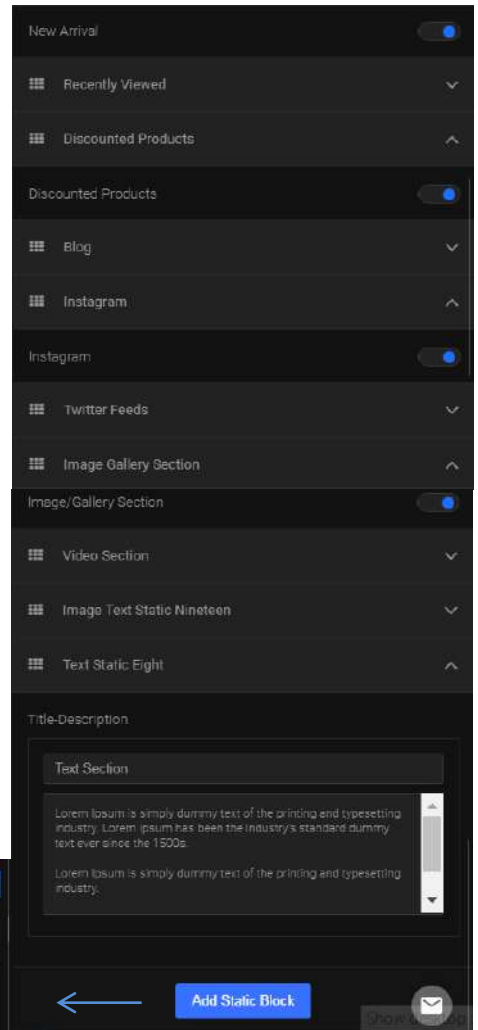

Header Screen Settings

- Edit and manage the header title and choose to display/ hide the cart in the 'Header' section
